

THE SECOND COLLAPSE

Spatial Interaction

Short-form video is becoming a cross-generational media habit, no longer limited to youth. As usage expands, information is increasingly consumed in quick, fragmented bursts rather than through sustained attention. Algorithms reinforce this shift by shaping behavior with repetition and instant reward, turning fragmented content into a dominant way of understanding the world.

short-video usage rate

For adults, short videos often replace traditional reading or television with rapid, discontinuous information flow, compressing complex topics into seconds of attention.

>34 age segment :
Practical Consumption
Routine Scrolling
Repetition Comfort
Low-Effort Information
Trust Bias

The 18-34 age segment consumes the highest volume of short-form content, averaging over 1 hour per day. Short-form videos are a primary gateway to news, education, and social

18-34 age segment :
Instant Gratification
Fragmented Attention
Trend-Driven
Micro-Learning
Algorithm Dependence

Tang Dynasty printed Diamond Sutra.

The Illustrated London News

This project uses architectural space as a narrative medium to visualize how humans have obtained information across different eras—from slow, tangible exchanges to today's fragmented and over-accelerated flow.

Sketch

Explanation

Creators produce low-quality yet attention-grabbing content, drawing audiences into prolonged engagement. Platforms, driven by engagement metrics, further amplify this material through algorithmic promotion, allowing creators to gain exposure and monetize attention at scale.

However, the rise of AI-generated video begins to disrupt this cycle. AI can produce low-cost, high-volume content far faster than human "junk-content" creators, revealing that visibility and value in the current media environment are structurally tied to scalability rather than substance, thereby deconstructing the existing information ecosystem.

Computational Sketch

As communication becomes more instantaneous, our ability to acquire knowledge has ironically declined, because the information has become highly fragmented, complex, and attention-driven.

Printing democratized knowledge, breaking the monopoly of the Church and ruling elites. Shift from manuscript culture to mass reproduction; literacy expanded rapidly.

Use plaster to create stone-like objects, they are hard and durable, but lacking in express detailed information

Infinite monkey theorem

a monkey hitting keys at random on a keyboard for an infinite amount of time will almost surely type any given text, such as the complete works of Shakespeare. It illustrates how random processes, given enough time and trials, can produce highly ordered and meaningful outcomes.

L16-18

DIGITAL ERA — THE AGE OF INTERACTIVITY AND GLOBAL NETWORKS

Medium: Television, internet, smartphones, social media platforms

Information becomes instant, global, and participatory. Return to openness—like cave paintings, everyone can “speak,” but now on a planetary scale.

L13-15

INDUSTRIAL ERA — MASS MEDIA AND THE PUBLIC SPHERE

Medium: Newspapers, telegraph, photography, radio, and film

Information became a social force, shaping public opinion and nationhood. Media created a shared public sphere; speed and reach of information increased dramatically.

L9-12

PAPER AND PRINTING REVOLUTION — KNOWLEDGE FOR THE PEOPLE

Medium: Paper (China, 2nd century BCE; spread via the Islamic world to Europe by the 13th century); block printing and later movable type (Bi Sheng in China, Gutenberg in Europe).

Printing democratized knowledge, breaking the monopoly of the Church and ruling elites. Shift from manuscript culture to mass reproduction; literacy expanded rapidly.

L6-8

FEUDAL AND RELIGIOUS ERAS — INFORMATION AS AUTHORITY

Medium: Handwritten manuscripts on parchment or paper, carved steles, temple inscriptions.

Knowledge was preserved to maintain social hierarchy and religious orthodoxy. Centralized control of information; transmission was slow and selective.

L3-5

ANCIENT CIVILIZATIONS — INSTITUTIONALIZATION OF INFORMATION

Medium: Writing systems emerged (Sumerian cuneiform on clay tablets, Egyptian hieroglyphs on papyrus, Chinese oracle bones).

Writing served for administration, taxation, and religion—information became a tool of power. From open sharing to information monopoly; literacy was limited to elites.

L1-2

PREHISTORIC ERA — OPEN AND SHARED COMMUNICATION

Medium: Cave paintings, rock carvings, and symbolic marks (e.g., Lascaux Cave in France, Altamira in Spain)

Information was shared collectively—paintings conveyed hunting knowledge, rituals, and cosmological beliefs. Visual and communal; no barriers between creators and receivers. But the information density is low and inaccurate
